

Quality Assurance Inspector

Koch Modular Process Systems, LLC is currently seeking a talented and hard-working Quality Assurance Inspector. This individual will report to and assist the Quality Assurance Manager in daily operations to ensure all active projects, fabricated equipment and module assemblies are constructed to the specifications set by Koch Modular and the customer. This position requires good time management skills to ensure the responsibilities listed below and any additional tasks requested by the QA Manager, as well as a travel schedule are met on a daily basis. This position is to closely monitor the fabrication and construction of Koch Modular projects and ensure the highest quality product is produced to our customers that meets or exceeds all specifications. If interested, please apply through careers@kochmodular.com.

Duties & Responsibilities:

- Inspector/Expediter
- Welding inspection on structural steel & piping
- Welding inspection on fabricated equipment, pressure vessels & heat exchangers
- Dimensional verification
- Coatings inspection
- Materials of Construction verification
- NDE inspection experience and certifications a plus
- Surveillance Report Writing
- Maintaining updating and issuing all project related QA documentation to KMPS personnel, 3rd party inspection services and suppliers.
- Coordination and transmittal of reports, specifications, drawings and other project related documentation between KMPS, vendors and 3rd party inspectors.
- Managing 3rd party inspectors
- Review document packages (purchase orders, material test reports, shop travelers, bill of materials, paint reports, test reports, as-built drawings and all other data package materials).

Requirements & Qualifications:

- Minimum of 5 years of relevant experience.
- BS degree in an engineering discipline.
- AWS Certified Welding Inspector – Current CWI inspection certificate.
- Level II Radiographic Interpreter (ASNT TC-1A).

- Ability to read, understand and interpret blue prints for fabricated equipment including heat exchangers, pressure vessels, columns, tanks, etc... and structural steel.
- Ability to read, understand and interpret the following module system drawings: Electrical, Insulation, Piping, Isometrics and P&ID's.
- Strong written and verbal communication skills.
- Willingness to travel on a regular basis to fabrication shops and job sites in US and Canada. Valid passport is required and overseas travel will be required on an as needed basis.
- Must be able to manage multiple project surveillance assignments simultaneously and respond quickly to deadlines and problems requiring immediate action.
- Knowledge of Microsoft Excel, Word, Power Point is required. Knowledge of Autodesk, AutoCAD, and scheduling software such as Primavera or Suretrac is a plus.
- Must have an advanced knowledge of piping systems, instruments and components.
- Have good social and people skills to be able to interact on a daily basis with clients, shop managers and employees. Working on a project team with daily interaction with project personal.
